

6 Ways Our Unique Forklift Trailer Mover Perfects Your Workflow

In the manufacturing business, you know that every second spent on the shop floor is valuable.

Tools that are too far away or excessive motion costs you precious time and sends your profit down the drain.

At Sidekick Attachments we hate inefficiency as much as you do - and we've been working to give it the boot. Now, after partnering with Iron Bull Manufacturing, we've developed a trailer-moving forklift attachment that saves you tons of time, money, and energy.

In fact, we're confident that we've changed your workflow so you can be more efficient for a long time to come.

Want to learn more? Let's look at how our unique forklift trailer mover can revolutionize your business.

Hand- Free Trailer Attachment

Undoubtedly, one of the biggest perks of our forklift trailer mover is the fact that you never have to get off the forklift to move a trailer.

Our trailer mover slides seamlessly onto the forks of your forklift. Then, it easily attaches to many different types of trailers. The self-locking attachment ensures you won't have any accidents while moving the trailer.

Simply set the trailer down and put the trailer mover attachment wherever you desire when you're finished.

It literally only takes a minute or two to move a trailer, RV, or any other piece of equipment with a hitch.

Move Multiple Trailer Styles

There are plenty of different trailers that might be used around a manufacturing shop.

For example, A **gooseneck trailer** gets its name from its hitch, highlighted by a long, arched "neck" section at the front.

The unique coupler is designed to clear a pickup's closed tailgate, and it connects to a ball inside the bed for a frame-mounted hitch positioned over the rear axle.

Alternatively, a fifth-wheel trailer has a hitch that allows the driver to connect a cargo attachment to the back of a large vehicle. Their unique hitch requires the U-shaped coupling to be in the bed of the truck, positioned over the rear axle.

Need a visual?

If you've seen a transport on the highway, then that's a prime example of the fifth wheel design.

But here's the thing:

Most trucks only have the capability of towing one or maybe two types of trailers.

On the other hand, our forklift trailer movers have the capability of moving several trailer styles:

- Bumper
- Hitch
- 5th

Again, it's more bang for your buck!

No Safety Chains Or Extra Gadgets

Most of the time, hooking up a trailer involves securing several safety chains and sometimes other gadgets as well.

Since safety is of utmost importance, it is reasonable that safety chains need to be attached. However, with the self-locking mechanism on our forklift trailer movers, no chains are required. That's one extra step eliminated.

Now it is true that some people try to jerry-rig their forklifts to move trailers and other objects around the shop. It's common to see a forklift with a hole drilled in one fork or ball hitch attached.

Now it is true that some people try to jerry-rig their forklifts to move trailers and other objects around the shop. It's common to see a forklift with a hole drilled in one fork or ball hitch attached.

We hate to be the bearers of bad news, but in this case, it's for your own good.

Things like drilling a hole in forks or attaching a ball hitch to your forklift are not **OSHA compliant**.

If you choose to take the risk anyway, just know that you will be fined if OSHA discovers your practice. And is dealing with that stress worth it, especially when there are other quality items available on the market?

Absolutely not.

Plus, altering your forklift with holes and ball hitches is hard on the machine itself. For example, forks with holes in them often begin bending.

In this case, forgo the chains, the gadgets, and the jerry-rigging, and get a forklift trailer mover that is safe, OSHA approved, and efficient.

Less Equipment Needed To Move A Trailer

Pretty much every type of shop that manufactures anything has a forklift around. They are absolutely essential.

However, if you manufacture items that need to be frequently moved (like RV's), you may need to have several trucks or tractors. Talk about unnecessary overhead. available to move whatever you are producing.

Not only does buying equipment to move trailers cost thousands of dollars upfront, but it also costs money to keep them running and filled with fuel.

It's particularly inefficient if you could use something you already had (like a forklift) to move trailers around your plant.

Of course, a forklift trailer mover gives you that opportunity. Rather than wasting money on extra equipment you don't need, you can repurpose your forklift to move almost anything with a hitch.

Safely Move Trailers

Do you remember the first time you tried to back up with a trailer attached to your truck or tractor?

It's as confusing as trying to figure out nutritional information on food labels.

Turn the steering wheel right, and the trailer goes left...right?

Unfortunately, this means that anytime you have a new or inexperienced employee, they won't be able to do the job of moving trailers around the manufacturing plant. Instead, you'll have to rely on experienced employees who would be better utilized doing more important tasks.

Even if you have a lot of experience moving trailers, the fact that you are using mirrors and can't see the back of the trailer makes it dangerous.

With a forklift trailer mover, you face the trailer, which makes moving them much more intuitive and safe.

Waste Less Space In Your Manufacturing Plant

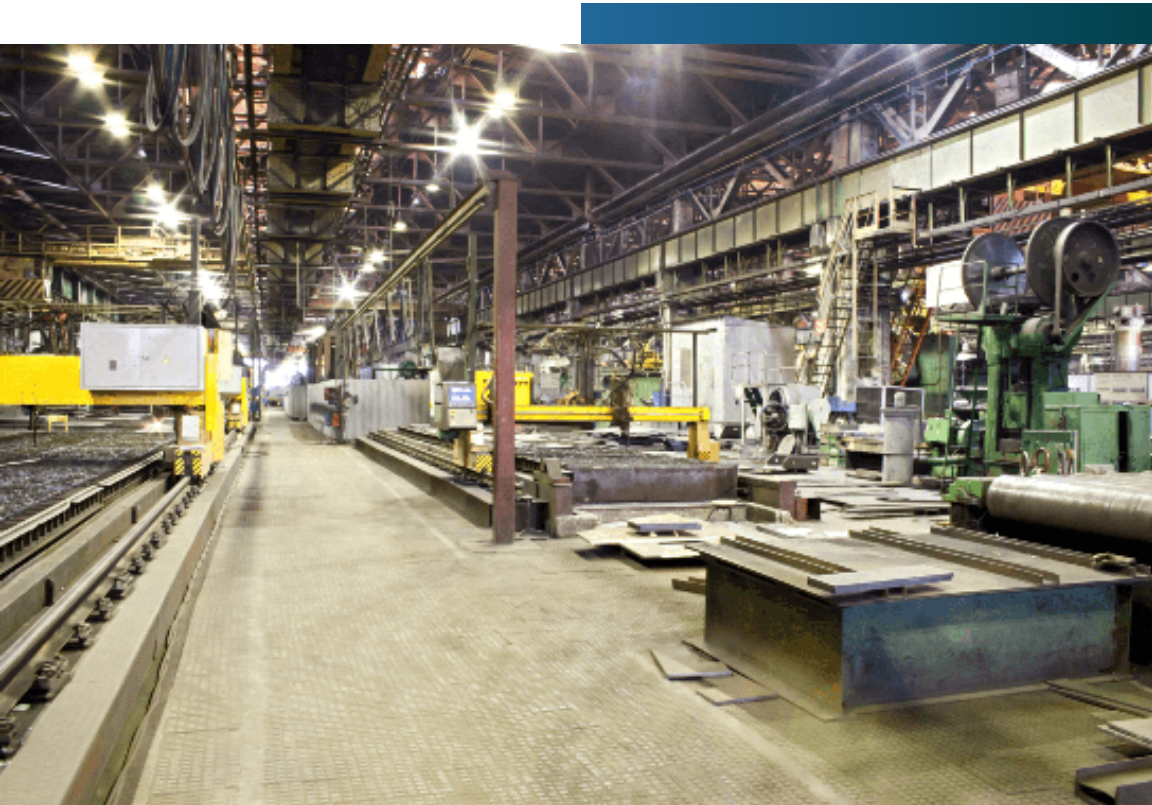

Let's make a quick comparison:

How big is a forklift when compared to a tractor or truck?

Probably about half the size!

Plus, forklifts use **rear-wheel steering**, which means they can maneuver into much tighter spaces than a truck or tractor.

The bottom line is that forklifts waste way less space in your shop than most other vehicles used to move trailers. If you can utilize a forklift trailer mover, you'll save space for other more critical functions in your production.

Conclusion

Your first step towards achieving maximum efficiency may be the forklift trailer mover from Sidekick Attachments.

You can stop wasting time, motion, and space when you purchase a forklift trailer, and instead, pump out quality products and leave your competition in the dust.

It's easy. All you have to do is:

- 1. Find your part:** We help you find the part that is correctly sized for your machine
- 2. Order your part:** After you purchase, we package your part correctly and ship within 2 days.
- 3. Your forklift does more!** Enjoy the increased efficiency and safety of your forklift.
