

4 Reasons Why Dependable and Custom Pallet Forks are so Important

You've probably experienced the frustration and inefficiency of not having pallet forks for a specific job or task that your team needs to accomplish.

Or, maybe you've had problems with generic forks wearing down, bending, or breaking quickly from normal shop use.

At Sidekick Attachments, we believe you deserve better, and that's why we designed some of the strongest pallet forks available on the market! Plus, we customize them for your specific situation

But having a set of pallet forks that you can count on does a lot more than just boost your efficiency.

Let's dig in and see how custom pallet forks that are durable can revolutionize your business!

1 Increased workplace safety

It's easy to want to cut corners and buy cheap pallet forks to save money. After all, it's tempting to think "Nothing is really going to happen."

And maybe, nothing will happen.

However, if you are moving heavy loads around your shop, cheating with generic pallet forks is not a good idea.

If an accident does occur, you are bound to face financial and legal ramifications. This in itself is scary, but unfortunately, the consequences don't stop there.

The aftermath of an accident can go far beyond a financial cost to a company - it can also seriously threaten your workforce's psychological health and could potentially dent their productivity in the long run.

Beyond that, there's the guilt you have to deal with in knowing that you could've prevented pain and suffering for one of your employees.

Safety is not the place to cut corners. Please, go ahead and buy the proper pallet forks for the job you are doing.

2 Peace of Mind

Let's say the pallet forks you are using are working just fine - but you notice that they are starting to bend a bit.

Or maybe you know that you purchased generic pallet forks that aren't built for the job you are doing.

Whether or not you actually get burned by an accident or not, you are putting mental stress on yourself by settling for something less than the best.

With custom-built and durable pallet forks, you don't have to be as concerned about OSHA compliance or an accident. You can send your employees to work each day, knowing that everything is under control.

At Sidekick Attachments, we designed our forks with an 'optimal heel' - a piece of extra reinforcement at the 90-degree wear point - to better withstand scraping, dragging, and bumping.

That means our forks are extra strong and durable - ready to consistently handle any job you throw at them!

3 Have The Right Tool For The Job

Have you ever worked at a job for hours, trying in vain to complete it? Frustration mounts, and you can't figure out "why this stupid thing won't work!"

Most of us have been there - and many times the job is so hard because we don't have the proper tool for the job.

This principle goes for pallet forks as well.

You can bang your head against the wall trying to complete a job with forks that aren't made for it - but why would you do that? Even if you do complete the job, you know you'll be steaming mad when you finally finish.

At Sidekick Attachments, we design and size our pallet forks for your specific machine, and even make custom changes for the job you need to complete.

That means you can have exactly what you need to get the job done with no fuss.

The result?

Increased efficiency and a lot less frustration.

It's a win-win!

4 Boost Employee Confidence

When you give your employees the tools they need to complete a job you boost their confidence dramatically.

This is a big deal!

Take it from us: disgruntled employees are bound to try to get by with the bare minimum. They have no reason to give their best in helping a business succeed.

On the other hand, employees that are content and fulfilled at the workplace stick with you for the long haul and add value to a company. In fact, happy employees are up to 20% more productive than unhappy employees.

While purchasing custom pallet forks doesn't guarantee employee satisfaction, it does help. After all, when workers feel successful and safe, the chances of them being satisfied dramatically increases.

Conclusion

You don't need to worry about your forks failing inspection, breaking, bending, or not being designed for your machine.

Instead, purchase your new forks and enjoy extra strength and reinforcement with our Optimal Heel design, have the right forks for your work and job application, and have forks correctly sized for your specific machine!

Plus, we do our very best to ensure that working with us is a phenomenal experience.

To do that we offer a 15-day satisfaction guarantee, a 90-day warranty, custom sizing and options, and in-stock shipping within 2 days.

If that's not enough, working with us is easy.

All you have to do is:

1. Find your forks: We help you find the forks that correctly fit your machine and make sure they are properly sized.
2. Order your product: After you purchase, we package your product correctly to ensure it arrives safely and without defects.
3. Have Peace of Mind with Your Forklift: Know that your forks are designed for long-term durability and help with OSHA compliance.

Contact us today and order your pallet forks. We look forward to hearing from you!
